

SOMMER – Synoris 550

Standard Model. Revolutionary. Reliable.

Unlike conventional garage door openers that use a noisy chain, belt or screw the synoris has only one moving part with no moving chain or belt. The motor glides silently along the chain which is embedded in a sturdy steel rail. It is an extremely quiet garage door opener with virtually no vibrations. Perfect for homes with living spaces above or next to the garage.

Featuring very smooth operation with soft start and stop technology, the motor is located at the door instead of the back of the opener, maximizing power where you need it most. This is why the synoris is the way to power your garage door.

Also the only garage door opener with a LIFETIME WARRANTY ON THE ENTIRE OPENER, not just the belt and the motor.

Features:

- For doors up to 550 lbs. - spring balanced
- Ideal for garages with adjacent living spaces
- No maintenance or lubrication required
- Low profile - just 1.5 in. clearance needed
- Soft start and stop relieves stress from the opener
